

Test and laboratory distributors for ETH Zurich

New test and laboratory distributors for students and professors of the ETH have been purchased in order to replace the more than thirty year old steel sheet distributors.

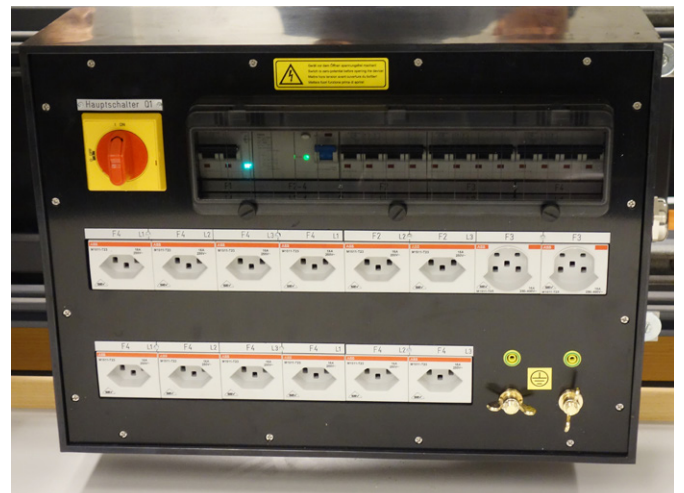

Customer/installation engineer:	ETH Zurich
Stipulation:	New distributors for laboratory and test workplaces according to electrical regulations
Solution:	Hard rubber power distribution box type 7900
Article:	179279
Quantity:	245
Equipment:	Several sockets with protections
Areas of application:	Laboratory and test distributors for pluggable connections of test instruments

Initial situation

The old laboratory and test workplace distributors used for many years did no longer comply with the present regulations and were faulty in parts. With the new hard rubber power distributors we were able to supply extremely robust and long-lasting power distribution boxes which meet the present electrical regulations. All-in-all 245 distributors were supplied and flexibly integrated in the existing installation concept.

Customer benefits

- Customer-specific special productions tailor-made to the needs of ETH
- Massive impact resistant and robust version in hard rubber
- Flexibly deployable with connection cable; assembled ready for connection
- Tested and certified special distributors with individual routine test
- Maintenance free – with long term availability of all individual parts as spare parts
