Starting situation

As part of the renovation of the paths and stairways, the municipality – as owner – wanted lighting suitable for the setting and use. The topic of «safety» was a central criterion for the cemetery as a meeting place that is visited by children as well as older people.

The LaneLED profiles are pushed into the stainless steel handrails (vandal-proof) during assembly, without having to glue them. Assembled and mounted on site piece by piece.

Customer benefits

- Improved safety in the dark
- Protection against vandalism
- Protection against tripping
- Age and weather-resistant
- Slim, timeless design
