

Platform lighting TrafficLED

As direction display for train arrival in the station and for the safety of the rail travellers, the platform illumination of TrafficLED is well visible during the day as well.

Customer/installation engineer:	Berner Oberland Bahnen AG
Stipulation:	Optical illumination of train arrival in station for the safety of rail travellers
Solution:	TrafficLED with running light
Article:	TrafficLED 2x6 orange (Item no. 136194)
Quantity:	32 piece
Equipment:	2x6 orange
Areas of application:	Railway station, garage entrances, roundabouts etc.

Starting situation

The platform at Wilderswil railway station is crossed by rail travellers and schoolchildren en route to the neighbouring schoolhouse. The "Schynige Platte" railway also starts out from Wilderswil station. For safety purposes, platform lighting was specified. This lights up to indicate the direction of travel of a train, and is also clearly visible during daylight hours.

In addition, it was chosen to prevent mechanical damage from being caused by snow-clearing activities. The TrafficLED, with its stainless steel top section, affords the ideal solution for this.

Customer benefits

- Optical illumination of train arrival in station
- Safe crossing of the railway line
- Also visible during daylight hours
