Starting situation

The request of many customers was the reason for the development of a small, compact torch light / hand lamp with very good lighting power. Compared to conventional torch lights with halogen luminants, the power consumption of LED is very low – and at the same time the operating time increases. Moreover, a large number of functions is requested in the same housing. A large number of needs are met with the present torch-light. Application of battery or rechargeable battery-operated hand lamp with or without emergency light function.

Customer benefits

- small, easy to handle, robust and durable
- with a lot of accessories and spare parts
- simple 230VAC or 12VDC - 48VDC charging station are available for installation in vehicles
- various light functions possible
- large choice of colours and individual labelling upon request
- tested and certified for various operational purposes
